

# Create an ASP.NET WebForms Application to Display the UI for Managing the School Database

## DESCRIPTION

Using ASP.NET WebForms project to create the views to manage the school database

This will be a prototype with only the UI navigation flow and no backend code.

### **Background of the problem statement:**

Rainbow School is creating software for school management. After creating the database, they want to quickly prototype the UI and navigation flow to get an idea of what is required in the actual application.

### **You must use the following:**

Visual Studio 2019 Community Edition

SQL Server 17 Express Edition

## Approach

- Webform will only consists of ui part there is no database involved or not used any storage to store the value.
- School Database will consist of 2 tables of student and Class for which there will be a Registration part and List part
- Registration will consists of form from which we can register any student and list will display all the student.
